Monitoring metric	Treatment	Control
Facility-month reporting completeness (%)	94.4	94.4
Ward-month reporting completeness (%)	94.0	91.3
Facilities with uninterrupted monthly reporting	2/6	2/6
Median longest continuous reporting streak (months)	25.0	26.5
Facility-months with >0 reported deaths (%)	82.8	78.4
Mean monthly admissions	237.6	235.7
Mean inpatient mortality rate, % (95% CI)	1.68 (0.42 to 2.95)	1.50 (0.79 to 2.22)

CI: 95% hospital-cluster-robust Wald-type interval (CR1, t reference; 6 hospitals per arm, df=5). Mortality: mean of 204 facility-month rates per arm, January 2023-December 2025. Descriptive reporting quality and continuity, not an intervention-effect or equivalence test. Intervals are approximate with few clusters. Missing death components contribute zero under the existing blank=zero convention; source meaning is not fully validated, and these CIs are conditional on that convention.
